Dear Mr. Daniels:

DIVISION OF
OIL, GAS & MINING

RE: Poverty Point Limestone Quarry ACT/045/012
Tooele County, Utah

After our telephone conversation today I decided it would be advisable to confirm my inquiry and include information discussed with a progress report of operations to date in accordance with Rule M-8.

In most states Ideal reports quarry progress on the anniversary date of the permit. Corporate calendar indicated April 27 on the subject quarry. Review of Rule M-8 reminded that Utah reports are due at the end of each calendar year on a prescribed form. My telephone inquiry concerned the form and reporting. You indicated Ideal should have received a notice with report form copies which you offered to forward soon.

A letter dated October 2, 1981 confirmed notification to the Division that haul road construction started late in September 1981. In accordance with the plan an excellent haul road was constructed with material from the adjacent BLM - State Highway borrow pit. The entire haul road was topped with minus two inch limestone from the quarry. The disturbed portion of this 50 feet wide nine (9) acre BLM R/W was about seven (7) acres, as most of the road used only 30 feet of the R/W. This seven (7) acres includes about 1 1/2 acres of existing road which we later found was also Utah State Highway access to the borrow pit.

Colluvium overburden (8,000 to 10,000 cubic yards) was removed from the lower portion of the limestone deposit. Part of this was stockpiled as soil substitute with the rest used to provide a 2 1/2 to 3 acre portable crusher limestone stockpile area. The quarry area and blasthole drill access will likely disturb no more than an additional three (3) acres by 1985. Disturbed area will therefore total about 13 acres (road seven (7), operating three (3), quarry three (3)) of the 15 acres currently bonded.
